Find player, team or event

DATABASE STATUS

Last ratings update	Aug. 15, 2025, 12:57 a.m. (UTC +0000) (log (https://web.archive.org/web/20250815213755/http://static.aligulac.com/update.txt))
Game data	1036327 games, 473409 matches
Wings of Liberty	152967 games (14.76%), 70970 matches (14.99%)
Heart of the Swarm	193512 games (18.67%), 95968 matches (20.27%)
Legacy of the Void	689848 games (66.57%), 306471 matches (64.74%)
Online	893495 games (86.22%), 411251 matches (86.87%)
Offline	142832 games (13.78%), 62158 matches (13.13%)
Matches with event info	472222 (99.75%)
Uncatalogued matches	3004 (0.63%)
Players	23533, of which 1507 Koreans (6.40%)
Teams	526, of which 140 active

TOP SUBMITTERS

DATABASE DUMP

You can download a PostgreSQL dump here (<https://web.archive.org/web/20250815213755/http://static.aligulac.com/aligulac.sql>) (1969.0 MiB) or here (<https://web.archive.org/web/20250815213755/http://static.aligulac.com/aligulac.sql.gz>) (352.2 MiB gzipped), current as of Aug. 15, 2025, 3:04 a.m. (UTC +0000). It is free to use for non-commercial purposes if you credit this website when doing so.

The dump contains 11 tables. Some columns are foreign keys to tables that have been removed from the dump (primarily involving user accounts). Everything given below is in terms of **PostgreSQL standards**.

PLAYER

Contains player information.

Name	Definition	Description
id	integer not null	primary key
tag	character varying(30) not null	in-game name of the player
name	character varying(100)	real name

Name	Definition	Description
birthday	date	birthday
mcnum	integer	MC number
tlpd_id	integer	external TLPD ID
tlpd_db	integer	bit-flag value denoting which TLPD databases this player is in (1 = KR WoL, 2 = IN WoL, 4 = HotS, 8 = HotS beta, 16 = ...)
lp_name	integer	title of Liquipedia page (the part after https://liquipedia.net/starcraft2/)
sc2e_id	integer	external sc2earnings.com ID
country	character varying(2)	ISO-3166-1 alpha-2 country code
race	character varying(1) not null	P, T or Z for normal races, R for random and S for race switcher
dom_val	double precision	their PP score (see Hall of Fame (/web/20250815213755/http://www.aligulac.com/records/hof/) for explanation)
dom_start_id	integer	foreign key to period (start of PP-period)
dom_end_id	integer	foreign key to period (first period after end of PP-period)
current_rating_id	integer	foreign key to rating (should link to the latest published rating of the player)

MATCH

Contains game information.

Name	Definition	Description
id	integer not null	primary key
period_id	integer not null	foreign key to period (the period this match was played in)
date	date not null	when the match was played (often approximate)
pla_id	integer not null	foreign key to player (player A)
plb_id	integer not null	foreign key to player (player B)
sca	smallint not null	score for player A
scb	smallint not null	score for player B
rca	character varying(1) not null	race for player A (not necessarily same as pla.race, S is not allowed)
rcb	character varying(1) not null	race for player B (not necessarily same as plb.race, S is not allowed)
treated	boolean not null	true if the match has been rated
event	character varying(200) not null	tournament, round, group etc. (superceded by eventobj_id if latter is not null)
eventobj_id	integer	foreign key to event (supercedes event field)
submitter_id	integer	foreign key to a table removed from the dump
game	character varying(200) not null	game version used (WoL, HotS, LotV)
offline	boolean not null	whether this match was played offline
rta_id	integer	foreign key to rating (rating of player A at the time of the match)
rtb_id	integer	foreign key to rating (rating of player B at the time of the match)

EVENT

Contains event information. Events are organized in a tree as defined by the **eventadjacency** table. "Event" in this case means anything from organizer, season, tournament, round (including qualifiers), group, days and weeks, etc.

Name	Definition	Description
id	integer not null	primary key
name	character varying(100) not null	name of this node
parent_id	integer	parent node
lft	integer	deprecated
rgt	integer	deprecated
closed	boolean not null	whether the event is finished or not
big	boolean not null	whether the event is considered large (many games)

Name	Definition	Description
noprint	boolean not null	whether this event should be skipped in the fullname of descendants
fullname	character varying(500) not null	full name of this event (including names of ancestors)
homepage	character varying(200)	URL of the event website
lp_name	character varying(200)	title of Liquipedia page (the part after https://liquipedia.net/starcraft2/)
tlpd_id	integer	external TLPD ID
tlpd_db	integer	bit-flag value denoting which TLPD databases this event is in: (1 = KR WoL, 2 = IN WoL, 4 = HotS, 8 = HotS beta, 16 = W
tl_thread	integer	TL.net forum thread ID
prizepool	boolean	whether this event has an associated prizepool (NULL if unknown)
earliest	date	date of earliest match
latest	date	date of latest match
category	character varying(50)	team, individual or frequent (only set for root nodes)
type	character varying(50) not null	category, event (i.e. tournament) or round (you can assume that ancestors of events are always categories and that de
idx	integer not null	sorting index

EVENTADJACENCY

Contains the tree information for events. There is a row here for every ancestor-descendant relationship. This table contains the transitive closure, so links of any distance are listed.

Name	Definition	Description
id	integer not null	primary key
parent_id	integer not null	foreign key to event
child_id	integer not null	foreign key to event
distance	integer	how many edges between the nodes

RATING

Contains rating information.

Name	Definition	Description
id	integer not null	primary key
period_id	integer not null	foreign key to period
player_id	integer not null	foreign key to player
rating	double precision not null	current rating
rating_vp	double precision not null	current rating delta vP
rating_vt	double precision not null	current rating delta vT
rating_vz	double precision not null	current rating delta vZ
dev	double precision not null	current RD
dev_vp	double precision not null	current RD vP
dev_vt	double precision not null	current RD vT
dev_vz	double precision not null	current RD vZ
comp_rat	double precision	performance rating in this period
comp_rat_vp	double precision	performance rating vP in this period
comp_rat_vz	double precision	performance rating vT in this period
comp_rat_vt	double precision	performance rating vZ in this period
bf_rating	double precision not null	smoothed rating
bf_rating_vp	double precision not null	smoothed rating vP
bf_rating_vt	double precision not null	smoothed rating vT
bf_rating_vz	double precision not null	smoothed rating vZ

Name	Definition	Description
bf_dev	double precision	smoothed RD
bf_dev_vp	double precision	smoothed RD vP
bf_dev_vt	double precision	smoothed RD vZ
bf_dev_vz	double precision	smoothed RD vT
position	integer	rank
position_vp	integer	rank vP
position_vt	integer	rank vT
position_vz	integer	rank vZ
decay	integer not null	number of periods since last game
domination	double precision	rating gap to number 7 (used in the Hall of Fame (/web/20250815213755/http://www.aligulac.com/records/hof/))
prev_id	integer	foreign key to rating; previous rating for this player

PERIOD

A period represent a discrete time interval used for rating computation purposes.

Name	Definition	Description
id	integer not null	primary key
start	date	starting date (inclusive)
end	date	ending date (inclusive)
computed	boolean not null	whether this period has been rated
needs_recompute	boolean not null	whether this period needs re-rating (something has changed)
num_retplayers	integer not null	number of returning players
num_newplayers	integer not null	number of new players
num_games	integer not null	number of games played
dom_p	double precision	OP-score for Protoss
dom_t	double precision	OP-score for Terran
dom_z	double precision	OP-score for Zerg

GROUP

Contains group information (for now, this means teams).

Name	Definition	Description
id	integer not null	primary key
name	character varying (100) not null	name of group
shortname	character varying (25)	short name of group
scoreak	double precision	all-kill score (if team)
scorepl	double precision	proleague score (if team)
founded	date	date founded
disbanded	date	date disbanded
active	boolean not null	whether the group is active
homepage	character varying (200)	URL of team website
lp_name	character varying (200)	title of Liquipedia page (the part after https://liquipedia.net/starcraft2/)
is_team	boolean not null	whether this group is a proper team
is_manual	boolean not null	whether this group has manually added members or not (currently has no effect, there are no automatic groups)

GROUPMEMBERSHIP

Links teams and players together in a many-to-many relationship.

Name	Definition	Description
id	integer not null	primary key
player_id	integer not null	foreign key to player
group_id	integer not null	foreign key to group
start	date	start date of membership
end	date	end date of membership
current	boolean not null	whether the membership is in effect (many end dates are unknown, so this is needed)
playing	boolean not null	whether the player is a playing member (false for coaches, among others)

EARNINGS

Contains prize pool information. Each row represents a single payout to a single player.

Name	Definition	Description
id	integer not null	primary key
event_id	integer not null	foreign key to event
player_id	integer not null	foreign key to player
earnings	integer	amount in USD at the time of the win
origearnings	numeric(20,8)	amount in original currency
currency	character varying(30) not null	currency code
placement	integer not null	place in the event

ALIAS

Contains aliases for teams and players (common nicknames and shortened names.)

Name	Definition	Description
id	integer not null	primary key
name	character varying(100)	the alias
player_id	integer	foreign key to player
group_id	integer	foreign key to group

MESSAGE

Contains messages associated with some objects, containing perhaps relevant information.

Name	Definition	Description
id	integer not null	primary key
type	character varying(10) not null	info, warning, success or error
message	character varying(1000) not null	text describing this message
params	character varying(1000) not null	parameters for string interpolation
player_id	integer	foreign key to player
event_id	integer	foreign key to event
group_id	integer	foreign key to group
match_id	integer	foreign key to match

STORY

Contains stories (dots plotted in some players' rating charts.)

Name	Definition	Description
id	integer not null	primary key
player_id	integer not null	foreign key to player
message	character varying(1000) not null	text describing this story

Name	Definition	Description
params	character varying(1000) not null	parameters for string interpolation
date	date not null	when it happened
event_id	integer	foreign key to event (if applicable)
